

<p>Regular polygons: No. of lines of symmetry = Order of rotational symmetry</p>		<p>No. of sides of regular polygons = No. of lines of symmetry</p>	
<p>Regular polygons have equal sides</p>		<p>A rhombus has no equal sides</p>	
<p>A parallelogram is NOT a quadrilateral</p>		<p>An equilateral triangle has 3 lines of symmetry</p>	
<p>Regular polygons have equal angles</p>		<p>A pentagon has 7 sides</p>	
<p>A square is NOT a regular polygon</p>		<p>A nonagon has 11 sides</p>	
<p>Regular polygons have equal sides but NOT equal angles</p>		<p>A nonagon has 9 sides</p>
